

Abstract

The invention relates to a wiper arm of a wiper device comprising a coupling section for connecting a flat wiper blade, wherein the wiper arm is designed to be U-shaped in cross section at least in part, with a back and two side walls.

The invention is characterized in that the coupling section comprises a stand-alone wall section of one side wall which protrudes beyond the back and the other side wall in the longitudinal direction, and a hinge pin attached to this wall section for receiving a connecting section of the wiper blade.
